DETAILED ACTION

1. This action is in response to applicant's amendment received on 07/31/2007.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with James Wray on September 11th, 2007.

The application has been amended as follows:

3. Claim 13 line 4 has been amended as follows, ...preferably between 50 mm and 70 mm has been removed.
4. Claim 14 is being added as follows, Measuring instrument according to claim 13, wherein the diameter of the measuring head in a neutral position can preferably vary between 50 mm and 70 mm.

Allowable Subject Matter

5. The following is an examiner's statement of reasons for allowance:
6. Claim 1 of the instant application has not been rejected using prior art because no references, or reasonable combination thereof, could be found which disclose or suggest a measuring instrument comprising an adapter including a measuring head and a connector, where the measuring head is provided with a largely hemispherical surface hi which there is a central through-going bore, where the measuring head is divided into

Art Unit: 3733

at least two separate sections, where the connector is hollow and slotted at one end in axial direction of the measuring head into a number of legs, the number of legs corresponding to the number of the at least two separate sections of the measuring head, where the legs of the connector are each connected to one of the at least two sections of the measuring head on the rear side of the hemisphere, where a securing arrangement is provided at the opposite end of the connector relative to the connection to the measuring head, a measuring unit including a actuating rod, where a main part has a conical shape that can interact displaceably axially with the central bore of the adapter and thereby change the diameter of the measuring head of the adapter, a mounting ring where means for engaging the securing arrangement of the adapter are provided, where the mounting ring is connected with a handle member, where in connection with the handle member there is provided means for axial displacement of the actuation rod and registration of the relative displacement of the actuation rod relative to the measuring head, and a depth gauge including a first part, which is preferably a smooth rod, and a second part with stop and measurement indications, where the depth gauge is provided for interacting with a through-going opening in the axial direction of the measuring instrument.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
